## ABOUT THE EVENT

Resource stability, eco-friendly production, and a balance between healthy market dynamics and sustainable consumption - all of these are topical concerns in both European markets and policymaking, and they are in dire need of more liberal voices and perspectives.

The European Dialogue Programme (EDP) of the Friedrich Naumann Foundation for Freedom launches a series of three digital Sustainability Weeks, to be held during the second half of 2021, which will be dedicated to aspects around sustainability and the economy with a particular focus on circular economy models. We kickstart the series with this public panel discussion, that is designed to foster knowledge building and to explore the liberal potential of cleaner technologies, less polluting business models and sustainable consumption habits. The panel will be rounded off with a virtual speed networking session, which gives participants the opportunity to make new contacts and/or renew existing relationships in the interactive web tool [Wonder.me](#).

To take things further, we continue the discussion in our DEEP DIVE interactive stakeholder networking session on 8 July, 16h00-17h30. Find more information on: <http://bit.ly/FNFSustainabilityWeek1>
